Software Engineer with 4 years of experience in building end-to-end solutions using Java, Message brokers, Docker, and Kubernetes

Top Skills

- **Java** - 4 years of industry experience contributing to the WSO2 Integration Platform while using Java concepts like SPI, CLI frameworks, and networking libraries
- **Message brokers** - Successfully developed production-grade event-driven systems with message brokers like RabbitMQ, ActiveMQ, and Solace
- **Docker, Kubernetes** - CKAD certified, and worked with real-world deployments
- **AI Agents** - Regularly use AI code agents like Claude Code and MCPs to improve productivity

Work Experience

WSO2 LLC, Colombo

Provides open-source software for digital transformation - API Management, Integration, CIAM

Senior Software Engineer

02/2024 - Present

- Developed ActiveMQ, Solace, & Debezium CDC connectors for the WSO2 Integration Platform
- Implemented integration solutions addressing customer requirements using RabbitMQ
- Developed the static code analysis tool for the WSO2 Integration Platform

Software Engineer (WSO2 LLC)

05/2022 - 02/2024

- Implemented the tool concept in the WSO2 Integration Platform
- Contributed to the test framework of the integration DSL (Ballerina) of the WSO2 Integration Platform
- Improved the dependency resolution and the package concept of the integration DSL
- Improved the functionality of the integration DSL compiler extensions

Intern Software Engineer (WSO2 LLC)

10/2020 - 04/2021

- Developed the OracleDB connector for WSO2 Integration Platform

Education

BSc.(Hons) Engineering, University of Moratuwa, Sri Lanka

2017-2022

- Specialized in Computer Science and Engineering
- GPA - 3.89/4.2
- Washington Accord accredited

Diploma in Computer System Design, NIBM, Sri Lanka

2016-2017

- GPA - 3.92/4.0

Certifications

Certified Kubernetes Application Developer (CKAD)

Valid through 2024-2026

Projects

Applying Machine Learning Techniques for Metagenomic Binning

2021-2022

Created a tool that classifies short DNA fragments of plasmids and chromosomes with high precision as the final year project of the university.

Technologies used - Pytorch, Scikit-learn, Python

GitHub Repository - github.com/MetaGSC/MetaPCbin

Sasnaka Sansada Web Application

2020

Back-end developer for Sasnaka Sansada, a community service organization. Implemented functionalities of authentication, event management, and automated email generation

Technologies used - Node.js, Express.js, PostgreSQL, Jest, Docker

Hosted Website - <https://sasnaka.org/>

GitHub Repository - github.com/gayaldassanayake/sasnaka-backend

The National Volunteering Platform

2021-2022

Team lead and back-end developer for a web platform for volunteers in Sri Lanka, by the United Nations. Implemented file server, email server, in-memory datastore, ORM, Cron jobs, and database migrations

Technologies used - Node.js, PostgreSQL, Sequelize, Redis, REST
